THE PORTRAIT OF THE BODY

MOVEMENT + PERSONAL INTENT

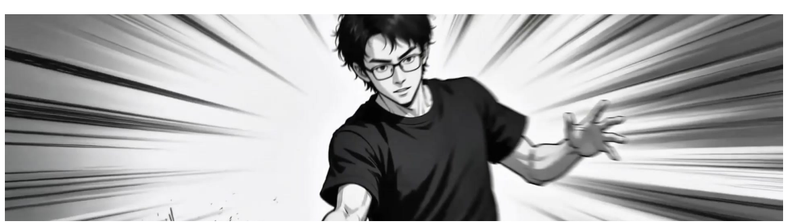

A sports film that feels like you.

An AI-assisted creation experience that turns tennis footage and personal choices into distinctive sports portraits.

AI-assisted cover illustration

MY ROLE

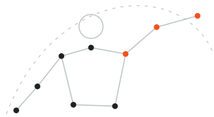

Choice-system design
Technical implementation
Exhibition + physical interaction
16 double-sided profile cards

CONTEXT

College + Chengshi Sports (Alibaba)
Three-person team
Sole Best Award in the collaboration

One sport. Different ways of being seen.

Four interviews explored what players record, keep and share - and what they want their videos to express.

04 INTERVIEWS
03 EXCERPTS BELOW

01 AUDIENCE

I01 / 03:21.280-03:43.380 LISTEN

A record for myself

Mainly keeps footage for personal recording and review; rarely shares it.

DESIGN RESPONSE

Allow a private archive. Let the audience be a personal choice.

02 EXPRESSION

I03 / 05:33.530-05:46.530 LISTEN

An attitude I want to show

Wants the video to communicate an attitude and the uplifting quality of playing sport.

DESIGN RESPONSE

Treat visual tone as an expression of the quality the person wants to show.

03 AGENCY

I04 / 02:21.380-02:44.220 LISTEN

A choice I want to make

Has a personal judgment about which moments matter and values taking part in editing.

DESIGN RESPONSE

Keep highlight confirmation and adjustment inside the AI workflow.

MY INTERVENTION

The team first aimed for full automation. I introduced personal intent as a creative input.

Design references: Data Humanism / Giorgia Lupi; SportsBuddy / Lin et al., 2025.

BODY DATA + PERSONAL INTENT → I designed a choice system so the person could guide the film, then revise it with the AI director crew.

Excerpt summaries are paraphrases. Four situated interviews informed the design.

Let the athlete help direct the film.

Personal choices set an expressive direction. The AI crew handles the production while bringing key decisions back to the person.

01 Define the intention

Q1 / MOTIVATION

○ For myself ○ For social media

Q2 / FOCUS

○ Technique ○ Atmosphere

Q3 / PURPOSE

○ Record / archive ○ Aesthetic expression

Q4 / CONNECTION

○ Reserved ○ Proactive

4 FAMILIES / 16 STARTING PROFILES

I organised interview differences into four choice points. Each direction remains open to adjustment.

Emotion Splash
4 variations

Tactical Matrix
4 variations

Kinetic Echo
4 variations

Silent Archive
4 variations

02 Decide with the crew

AI DIRECTOR CREW — INTERACTION PROTOTYPE

POSE SCOUT SELECT SCRIPT VFX EDIT

SELECT / YOUR MOMENTS

Which highlights feel like you?

- [x] Forehand winner / 4 s
- [x] Backhand passing shot / 3 s
- [ ] Serve / 2 s

+ Add a moment the crew missed

SCRIPT / YOUR TONE

POISED | ENERGETIC | PLAYFUL

LET THE CREW CHOOSE | KEEP MY DIRECTION →

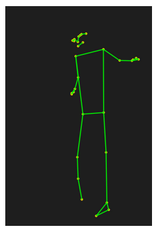

Accept a suggestion, keep a personal pick, change the tone or delegate. The roles make an automated process legible and negotiable.

POSE / body SCOUT / action SELECT / moments
SCRIPT / tone VFX / effects EDIT / composition

English redrawing of the course web prototype.

03 Turn movement into expression

ANALYSE THE BODY

Body keypoints

APPLY EFFECTS TO THE REAL ATHLETE

Person segmentation + motion-event effects

SEPARATE FILM EXAMPLE / PLAY

I implemented keypoint tracking, segmentation and event-based effect control. My key iteration moved the skeleton into the analysis layer so effects could preserve the athlete's real appearance and movement.

Play your portrait before it becomes a film.

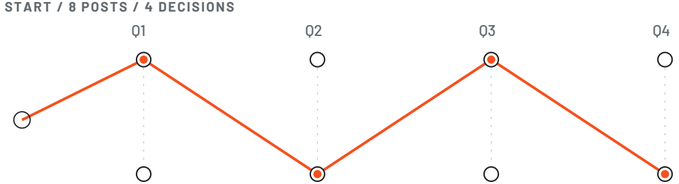

I translated the choice system into a physical sequence: wind a path, find a profile and combine visual effects by hand.

01 Wind a path

A thread exits one starting hole. Visitors make four decisions across two rows and four columns of copper posts, leaving a visible record of their choices.

1 START / 8 POSTS / 4 DECISIONS

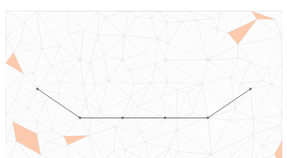

START Example route / one post per column.

02 Read your profile

I designed 16 double-sided cards. A path identifies the card; a short character poem and visual recommendations suggest an expressive direction.

CARD 01 / FRONT + TRANSLATED REVERSE

She does not shine through someone else's template; she makes the whole movement her own.

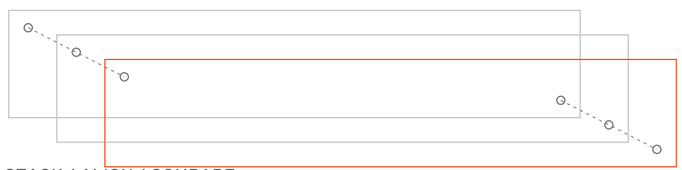

Recommended: impact freeze, ghost trails and narrative treatment.

03 Compose a visual preview

Transparent effect cards fit over two alignment posts on a Federer image. The shared base makes different combinations directly comparable.

TWO POSTS / MULTIPLE CLEAR LAYERS

STACK / ALIGN / COMPARE

CHOICE → PATH → PROFILE CARD → EFFECT COMBINATION

A tangible rehearsal of visual authorship.

From a personal film to a shared experience.

I connected the research display, films, winding apparatus and profile cards within one exhibition environment.

MY EXHIBITION APPROACH

Make the idea something people can take part in.

I organised the visitor journey around four actions: understand the theme, make a choice, try a visual combination and watch the films.

White surfaces, orange type, hanging body models and thread paths brought the project's visual language into the space.

LIVE EXPLANATION / Guiding visitors through the project.

THE COURSE EXHIBITION / Final presentation group photograph.

WHAT I BRING FORWARD

I want to connect personal expression, AI-assisted creation and physical interaction - so a system responds to the person using it.

ONE CONNECTED EXPERIENCE

- **UNDERSTAND**
  Research + concept display
- **CHOOSE**
  Thread paths + profile cards
- **TRY**
  Transparent visual layers
- **WATCH**
  Moving-image screen

Best Award

Sole Best Award in the course collaboration; recognised by Chengshi Sports.
